CYBER WAR ROOM

The breach is live. You are in charge.

The Cyber War Room is a branching incident simulation. You lead the response as the security leader of a fictional company, and every call you make changes what happens next.

1. **Take the call**
   An incident lands with incomplete information, a clock running and people who want answers.
2. **Make the decisions**
   Contain, escalate, disclose, pay or hold: each choice moves the scores and opens a different path.
3. **Face the stakeholders**
   Talk the situation through with stakeholders on a video call inside the simulation.
4. **Report to the board**
   Finish with a board report of what happened, what you decided and why.

Set your own pace

Choose how much time each decision gives you, from relaxed to quick, or play with no timer. A free account includes 3 Cyber War Room campaigns.

All companies, people and incidents in the Cyber War Room are fictional.
